

You can sand the 12, 3, 6, and 9 o'clock positions on your grill to help your Multi-Rack fit inside better. Note that if your grill's inner diameter measures 19" no sanding should be necessary. However, if your grill's inner diameter measures 18 ¾", sanding will likely be required. *You may want to see how well your Multi-Rack fits before you do any sanding.*

Only sand  $\frac{1}{2}$  of an inch off of the rim, and sand an area that is about 3 to 4 inches in length. That is all you should need.
